

What if you could offer your clients  
**Printed Products**  
that were capable of maintaining a surface that is  
**99.9% free of microbes?**

Now you can, with  
**Antimicrobial Shield 900 Series Coatings**

A revolutionary development in Aqueous and UV Coatings created and developed by Ctg2 Technologies and Biomaster®, *the recognized leader in antimicrobial additive technology.*

The Shield 900 Series of coatings incorporates Biomaster's silver ion technology which uses a naturally occurring mineral, silver, that has been safely used for centuries as an antimicrobial with no harmful effects. The result is a revolutionary new line of coating products that have *durable, inbuilt product protection against microbes.*

Because they are inbuilt, the antimicrobial properties never wear off, last the life of the printed product, will not leach out of the coating, and provide 24/7 product protection against the build-up and accumulation of microbes. The Shield Series makes the surface of your printed piece 99.9% cleaner than standard untreated coatings and is quite literally a Shield to help protect your printed piece against microbes; offering end-users and consumers a cleaner experience with your client's printed products.

**Shield 900 Series of coatings are suitable for:** Offset, Flexo and Gravure printing

**Available in the following finishes:**

AQC-AM900 Shield Aqueous Gloss  
AQC-AM910 Shield Aqueous High Rub Gloss  
ACQ-AM920 Shield Aqueous Satin  
AQC-AM940 Shield Aqueous Matte  
AQC-AM945 Shield Aqueous Soft Touch  
UVC-AM950 Shield UV Gloss  
UVC-AM960 Shield UV Satin  
UVC-AM970 Shield UV Matte

**Folding Carton finishes available:**

AQC-AM904 Shield Aqueous Folding Carton Gloss  
AQC-AM924 Shield Aqueous Folding Carton Satin
